

Continuity Biosciences Expands to Torino, Italy

Bradenton, FL & Houston, TX – Feb. 21, 2025 – Continuity Biosciences, LLC, is excited to announce our expansion to Torino, Italy. “The expansion leverages the deep roots with my alma mater, Politecnico di Torino, one of the leading engineering institutions in Europe” said Prof. Alessandro Grattoni, Co-Founder and Chief Scientific Advisor. “Crucially, we are able attract and hire talent that have returned to Torino after training in my laboratory at the Houston Methodist Hospital in the United States”.

"We are thrilled that Continuity Biosciences LLC has chosen the I3P Incubator for their European expansion, as it supports not only our objective of driving economic development, but also employment opportunities in novel industries for our highly talented student body and possible collaboration opportunities with our network of innovation", said Prof. Giuseppe Scellato, President of I3P, the Innovative Companies Incubator of Politecnico di Torino.

Continuity Biosciences LLC continues to add to its technology portfolio; increasing the different ways in which we can solve bioavailability and drug delivery challenges. “This expansion not only gives us access to highly trained and motivated bioengineering talent, but also proximity to highly regarded medical institutions for clinical collaborations”, said Dr. Ramakrishna Venugopalan, Co-Founder and Chief Executive Officer.

Stay-tuned for further announcements in this regard as we work to scale our team and operations in Torino, Italy.
